

The Math:

A Cybertruck can tow up to **11,000 pounds**. If the trailer weighs two thousand pounds and a 16 oz. PET bottle weighs 19 grams:

$$(9000\text{lbs} \times 454 \text{ g/lb}) / 19\text{g/bottle} = 215,053$$

$$16 \text{ oz of water} = 1.0 \text{ lb} = 454 \text{ g}$$

$$\text{Total filled bottle weight} = 19 + 454 = 473\text{g}$$

$$9000\text{lbs} \times 454 \text{ g/lb} / 473\text{g/bottle} = 8,638$$

The Math:

A Cybertruck can tow up to **11,000 pounds**. If the trailer weighs two thousand pounds and a 16 oz. PET bottle weighs 19 grams:

$$(9000\text{lbs} \times 454 \text{ g/lb}) / 19\text{g/bottle} = 215,053$$

$$16 \text{ oz of water} = 1.0 \text{ lb} = 454 \text{ g}$$

Answer:

215,000

But only about 8600
if filled with water.

Ha! Ha!

Answer:

215,000

But only about 8600
if filled with water.

Ha! Ha!

Answer:

215,000

But only about 8600
if filled with water.

Ha! Ha!

Answer:

215,000

But only about 8600
if filled with water.

Ha! Ha!

Answer:

215,000

But only about 8600
if filled with water.

Ha! Ha!
